## Nature's Beauty of Natural Shades

There is simply no substitute for the beauty of the materials used in natural shades. The colors and textures of bamboo, reeds, grass, and jute have a distinct character and one-of-a-kind look that synthetic materials can't match.

### Unique Characteristics of Natural Shades

#### Asymmetry

Materials used in natural shades are naturally grown and harvested. Variations in shape, thickness, texture, and grain are to be expected from Mother Nature. While adding personality, these variations create asymmetry in the weave that may alter the appearance of the finished shades. Specifically, you may notice:

- **Uneven Spacing or Gaps**—Differences in bamboo or reed shapes and thicknesses can create uneven spacing or gaps in the weave
- **Pattern Changes or Gaps**—The varying thickness of grassy materials, tied knots, and splices can create visual disruptions in the weave pattern or gaps in the weave
- **Length Differences**—Variations in thickness, bamboo joints, or reed sizes can create length differences from both sides of the shades
- **Bowing or Arching**—Different drying rates of bamboo fibers can create a bowing or arching effect on the finished shades

To minimize variations, all materials used are hand selected to comply with strict specifications. These variations are not considered flaws, but rather normal characteristics expected from naturally grown materials.

#### Color

Evolving with age, the color of bamboo, reeds, grasses, jute, and other natural materials will change slightly. Depending on material composition, they may lighten or darken due to direct sunlight or other climatic conditions. Uncolored or natural materials will experience the most color shift, changing from a green color at harvest to a yellow-brown color over three to six months. Color matching of shades cannot be guaranteed as these are natural reactions to aging.

With character, however, comes inherent natural properties that may influence the appearance of the finished shade. Recognizing and understanding the characteristic traits of natural materials provides more satisfaction and enjoyment once you know why each shade is truly unique!

#### Stretching/Sagging

The natural elasticity of yarns, combined with the weight of the woven material, may cause shades to stretch or sag from 1" (2.6 cm) to 1½" (3.9 cm), and sliding panels to stretch or sag from 1" (2.6 cm) to 2" (5.1 cm) after installation. This is particularly noticeable on inside mount shades or shades that extend from ceiling to floor. Ordering shades shorter than needed will help compensate for stretching over time.

#### Tips

During the shipping process, the natural material may have shifted slightly due to its woven construction, causing slight shortening or uneven edges.

**Height**—If after installation, the shades are slightly shorter than ordered, grasp the bottom of the shades and gently pull to stretch to the preferred height. Some materials will also stretch by themselves over time.

**Uneven Edges**—Lightly tap edge of the shades with a flat edge (for example, a ruler) until even.

**Frayed Edges**—If threads come loose near the edges, use a sharp scissors to trim off stray threads.

#### Light Control and Privacy

**Sheer**—Allows the most amount of light into the room for a minimum amount of privacy and a view to the outside. Objects in the room can be seen quite clearly through shades.

**Light Filtering**—Allows light to gently filter through and provides privacy. Images and shapes may be seen through these shades.

Natural shades may have variations and visual inconsistencies in color, weave, grain, and texture. They may also crack or split, twist or bow, shrink or stretch, and change color over time due to aging, direct sunlight, or other climatic conditions. These unique characteristics are inherent in natural materials and are not considered defects in material or workmanship. Exact color matches cannot be guaranteed.

## Multiple Shades on One Headrail: Natural Shades

1/2" (1.3 cm) Gap

For surcharges, see options pricing

### How to Measure

1. Measure overall width of area to be covered.
2. Measure width of the area each shade is to cover; measure and specify left shade first, continuing to the right.  
**NOTE:** Minimum of 1/2" (1.3 cm) between shades for operating clearance.
3. Total width of all shades, plus clearance (gap), must equal the overall headrail width.
4. Use standard inside or outside measuring directions for height.
5. For patio doors, measure height to within 1" (2.6 cm) of the floor either from the ceiling or a point high enough above door to provide clearance; cords should be on outside edges of shades; outside mount (wall) installation is recommended for patio doors.

## Valance Returns for Standard Valances

Window depths vary considerably depending on the age and style of the window. **Always** measure the window depth, regardless of the type of window treatment the client is considering. Knowing the depth when the order is placed can help prevent costly errors.

To calculate the return width, use this formula:

$$[\text{Standard return width}] \text{ minus } [\text{client window depth}] = \text{special return width to order for inside mount blind}$$

## Valance: Premiere Valance Only: Natural Shades and Natural Drapes
