Light Control and Privacy

Sheer: Allows the most sunlight and the least privacy.

Light Filtering*: Blocks some sunlight and offers some privacy.

Semi-Sheer*: Allows moderate sunlight and a little privacy.

Blackout: Blocks all sunlight and offers complete privacy.

*These fabrics allow some light to come through, so their colors may be influenced by changing light conditions. Colors may appear to vary depending upon the time of day and type of lighting, as well as whether the shade is partially or fully lowered.

- Five colors of continuous-loop cord available
- Continuous-loop lift stacks the fully raised shade more compactly than cord lift and holds it more securely
- A cord hold down device is included with all continuous loop lift systems; the device must be properly installed to safely control the cord loop
- For inside mount, install the shade in the back of the window frame so the cord tensioner can be mounted in front of the shade and not interfere with shade operation
- Larger shades use a larger clutch ratio for easier lifting, but additional pulls are required to raise the shade

Measuring Information

Mounting on a Wall or Molding:

Measure the width of each window from the corner on the mounting surface (molding or wall) to the point you would like to cover.

Mounting Above the Molding:

Measure the width of each window from the corner on the mounting surface to the point you would like to cover.

Projection measurement is the distance needed to clear any molding or obstructions that the shade will be mounted above.

NOTE: The projection (P) distance is needed to correctly calculate deductions for installations where the shades will use shims or projection brackets to clear molding. All projection distances must match for correct deductions to be calculated.

Measuring Information: Three-Sided Bay Window

Measure:

L and R: Width of each side window from the corners on the mounting surface to the point you would like to cover.

C1: Width of the center window on the mounting surface from corner to corner.

Angle L-C1:

Angle C1-R:

Projection:

Angle between the (L) and (C1) windows.

Angle between the (C1) and (R) windows.

If needed: The depth of the trim or molding the shade will be mounted above.

Measuring Information: Four-Sided Bay Window

Measure:

L and R: Width of each side window from the corners on the mounting surface to the point you would like to cover.

C1, C2: Width of each center window on the mounting surface from corner to corner.

Angle L-C1:

Angle C1-C2:

Angle C2-R:

Projection:

Angle between the (L) and (C1) windows.

Angle between the (C1) and (C2) windows.

Angle between the (C2) and (R) windows.

If needed: The depth of the trim or molding the shade will be mounted above.

NOTE: The projection (P) distance is needed to correctly calculate deductions for installations where the shades will use shims or projection brackets to clear trim or molding. All projection distances must match for correct deductions to be calculated.

For additional windows on bays with up to five sides continue with number progression for center shade sizes (C1, C2, C3, ...) and angles (angle C1-C2, angle C2-C3, ...) as needed.

Measure each bay angle using a protractor or angle finder or use two business cards in each bay corner as illustrated above and fax to customer service 1-800-552-4559.

The angle to use between adjacent center bay windows along a straight section of wall is 180 degrees.

PERFECT ARCHES are those in which the radius of the circle is constant at all points (height is exactly one-half the width).

PERFECT QUARTER CIRCLE AND FULL CIRCLE are those in which the width and the height are the same.

NON-PERFECT ARCHES are not constant at all points. Deviation of even 1/16" makes it imperfect. Non-perfect quarter circles and circles are those where the width and height are different.

- All non-perfect arches require a template

Options

Making a Template for Specialty Windows

1. Tape butcher paper, kraft, or construction paper over the window opening allowing plenty of overlap.
2. Being careful not to press against the template paper while tracing, draw an exact outline of the window opening. Pressing on the template paper may distort the paper and cause the wrong size to be made.
3. Remove the paper from the window opening. If the shade is an outside mount, add the desired amount of overlap to the window outline and draw a second outline around it to match the shape of the finished shade. Be sure to erase the inside line.
4. Mark the dimensions on the template. Check that the template dimensions match your measurements of the actual window opening.
NOTE: Make sure the template is of the window opening, not the glass only measurement.
5. Cut the shape from the paper.
6. PLACE THE TEMPLATE BACK INTO THE WINDOW OPENING TO CHECK FOR PROPER FIT COMPLETELY AROUND.
7. Indicate on the template
 - "Room side" and "top" on the template
 - Purchase order number
 - Customer's name
 - Your store name and account number
8. Roll up template and place in a mailing tube. DO NOT FOLD TEMPLATE.

NOTE: This is just a sample for illustration purposes only—other information may be needed for your order.

R-Value

R-Value indicates the effectiveness of the window covering at preventing energy from flowing to the outside. The higher the R-Value, the greater the insulating effectiveness.

Solar Heat Gain Coefficient (SHGC)

SHGC measures how well window covering blocks heat from the sun from flowing to the interior. SHGC is expressed as a number between 0 and 1. The lower the SHGC, the better a product is at blocking unwanted heat gain.
