- Ring Tilt
- **No charge**
  - Optional

## MOTORIZED TILT CONTROL

- **For surcharge, see Options Pricing or Motorization Tab**
- Radio Frequency (RF) only
- RF motorization allows blind operation from virtually anywhere in the house without direct line of sight.
- Tilts slats on multiple blinds simultaneously or individually
- Remotes, wall switches and timers available with RF motorization
- Offers enhanced security with the optional wireless RF Timer
- Tilt slats when entering or exiting a room with optional wireless wall switches

Follow these steps to determine if your blinds can be motorized:

1. Measure blind width and height.
2. Make sure measurements are within minimum and maximum size specifications listed to the left.
3. Multiply width times height. Round each dimension up to nearest inch for easy calculation to obtain blind size in square inches.
4. Make sure your calculations do not exceed the maximum size specifications listed.
5. Multiple blinds on one headrail are allowed if total size is under 7,200 sq. in. All blinds will operate together with one motor.

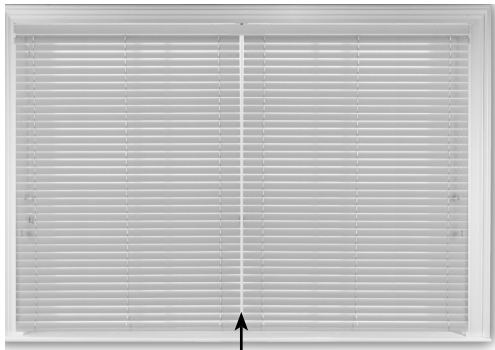

Minimum Width	19"
Maximum Width	84"
Maximum Height	108"
Maximum Size	7,200 sq. in.

**Example:**

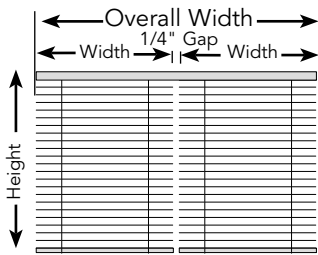

- 84" wide x 96" high = 8,064 sq. in. (over max. size)
- 18" wide x 62" high = 1,116 sq. in. (under min. width)
- 67" wide x 84" high = 5,628 sq. in. (ok)

## MULTIPLE BLINDS ON ONE HEADRAIL

1/4" Gap

Two Blinds on one Headrail

Three Blinds on one Headrail

**Surcharge:** Blind less than 84": Two blinds on one headrail  
 Three blinds on one headrail  
 See Price Charts and Options Pricing

**No charge:** Blinds 84"–120"

Two or more blinds can be installed on a single headrail to provide a practical treatment for larger windows or sliding patio doors.

Maximum Overall Size For Multiple Blinds	Control Locations	Gap
108" x 120"	Two-on-one: Left panel (tilt and lift left) Right panel (tilt and lift right) Three-on-one: Left panel (tilt and lift left) Right panel (tilt and lift right) Center panel (tilt left/lift right)	1/4"

**Measuring:**

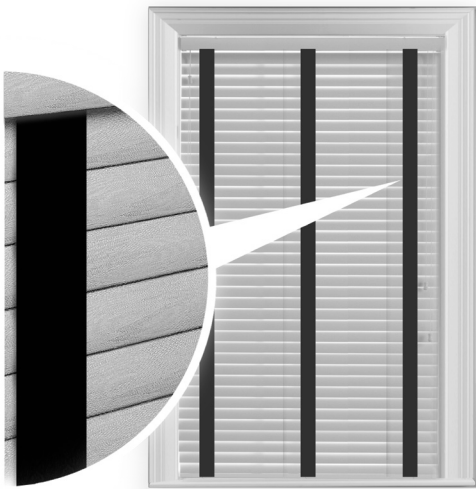

1. Measure overall width of the area to be covered. If space permits, an overlap of 1½" per side is recommended for outside mounts.
2. Measure the width of the area each blind is to cover. Measure and specify the left blind first, continuing to the right. Allow a minimum of ¼" between blinds for operating clearance.
3. Total width of all blinds, plus clearance(s) must equal overall width.
4. Measure height as follows:
  - a. For windows, use standard inside or outside measuring procedures.
  - b. For patio doors, measure height within ¾" of floor, either from ceiling or a point at least 6½" above the door frame. Check slat count table if blind is to completely clear the doorway.

**Ordering:**

1. Indicate whether two or three blinds are to be mounted on one headrail.
2. Specify total width of headrail.
3. Indicate each panel width separately, specify left blind first, continuing to the right.
4. Specify control positions, if other than standard.
5. Add appropriate surcharge (if less than 84").

## BAY AND CORNER WINDOWS

- Made as individual blinds to fit in bay or corner windows
  - Each section will have its own control, we recommend opposite corners
  - Indicate each blind with "bypass" or "butt". Bypass means the blind is mounted into the corner. Butt means the blind is butted up to the other blind.
  - Manufacturer will take appropriate deductions for proper fit
  - No additional charge
  - Cornices are not available
- Note:** If you do not want manufacturer to take deductions DO NOT order as Corner or Bay.

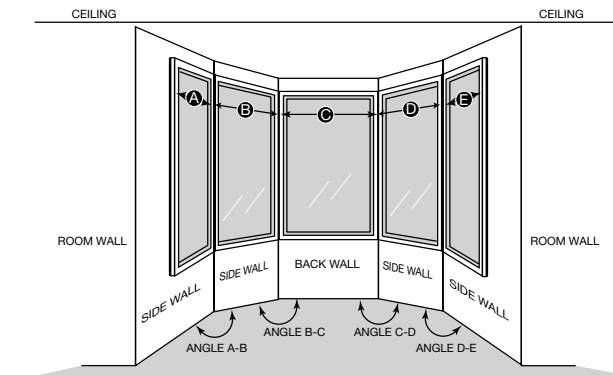

### Measuring Information

FRONT VIEW

FRONT VIEW

### Corner Window

Measure: Width of each window from corner to the point you would like to cover.

### Three-sided Bay Window

Measure:

A & C: Width of side windows from the corners to the point you would like the blind to cover.

B: Width of the center window from corner to corner.

Angle A-B: Angle between windows (A) and (B).

Angle B-C: Angle between windows (B) and (C).

Measure bay angle using protractor or angle finder. Or use two business cards in bay corner as illustrated and fax to customer service.

### Four-sided Bay Window

Measure:

A & D: Width of side windows from the corners to the point you would like the blind to cover.

B & C: Width of each window from corner to corner.

Angle A-B: Angle between windows (A) and (B).

Angle B-C: Angle between windows (B) and (C).

Angle C-D: Angle between windows (C) and (D).

Measure bay angle using protractor or angle finder. Or use two business cards in bay corner as illustrated and fax to customer service.

### Five-sided Bay Window

Measure:

A & E: Width of side windows from the corners to the point you would like the blind to cover.

B, C & D: Width of each center window from corner to corner.

Angle A-B: Angle between windows (A) and (B).

Angle B-C: Angle between windows (B) and (C).

Angle C-D: Angle between windows (C) and (D).

Angle D-E: Angle between windows (D) and (E).

NOTE: Measure bay angle using protractor or angle finder. Or use two business cards in bay corner as illustrated above and fax to customer service.

## VALANCE STYLES

Standard Valance

Double Valance

### Standard Valance

2" single slat valance is standard (no charge) and provides a finished look

### Double Valance

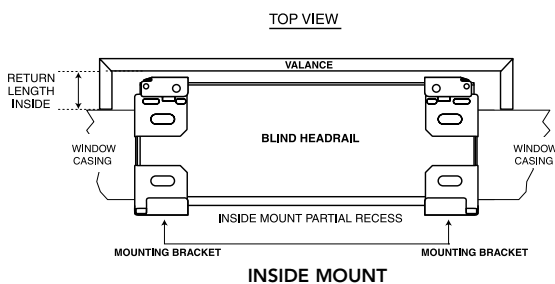

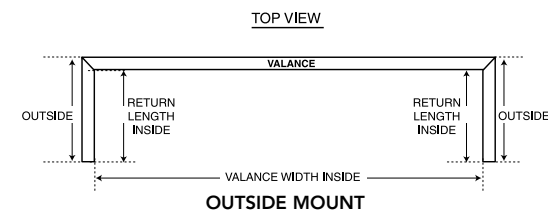

Provides better headrail coverage for a more upscale look, available as a surcharge option

See Cornice and Valance tab for additional options in Wood and other materials.

- Specify inside or outside mount

Valance Type	Tilt Type	Return Length	Full Recess Depth	Inside Mount	Outside Mount
Standard	All	3 $\frac{5}{16}$ "	3 $\frac{5}{16}$ "	120" FBW	120" FBW
Double	All	3 $\frac{15}{16}$ "	4"	120" FBW	120" FBW

## HOW TO MEASURE AND ORDER VALANCES

The appropriate valance (inside or outside mount) will be supplied with your blind order. For a more custom look, valance and returns may be special ordered.

**NOTE:** Valances with returns are measured and cut from the **INSIDE (BACKSIDE)** of the valance to ensure the most accurate fit when installed over the headrail or window frame.

### Outside Mount Valance

It is typically required that the valance is entered into the system and manufactured **WITH** returns. However, outside mount valances are available **WITHOUT** returns if needed.

**NOTE: FAXED** orders for outside mount valances will **AUTOMATICALLY** be entered with returns unless otherwise specified. Certain accounts that enter orders electronically **WILL BE REQUIRED TO SELECT WITH OR WITHOUT RETURNS** in their system during entry.

### Inside Mount Valance

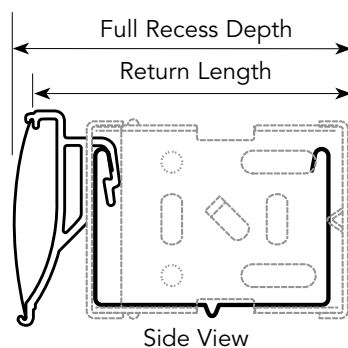

It is typically required for the valance to be entered in the system and manufactured **WITHOUT** returns.

**NOTE:** Valance without returns have ends that are cut straight and look best when the blind and valance are fully recessed into the window casing. However, inside mount valances are available **WITH** returns for blinds that are unable to be fully recessed into the window casing.

Additional ordering information:

- If projection brackets are requested at the time of order for a valance with returns, longer returns will be automatically sent.
- Please state at the time of order if the valance and return measurements are for the **EXACT** size required so that no additions or deductions are made.

## HOW TO ORDER VALANCE RETURNS

- Full recess is from front of valance to wall.
- Return length is from back of the valance corner to wall.

### Determining a special return length for **INSIDE MOUNT** blinds not fully recessed:

1. Using the chart, locate the standard return length by selecting your blind type, valance type and tilt type.
2. Measure the recessed space (depth) of your window casing.
3. Subtract the recessed space measurement from the standard return length.
4. The difference will be the Special Return Length you will need to order for your **INSIDE MOUNT** valances.

**NOTE:** Minimum return length is 1".
