Measuring

1. Measure overall width of the area to be covered. If space permits, an overlap of 1½" per side is recommended for outside mounts.
2. Measure the width of the area each blind is to cover. Measure and specify the left blind first, continuing to the right. Allow a minimum of ¼" between blinds for operating clearance. **NOTE:** Cordless lift has minimum ⅜" gap.
3. Total width of all blinds, plus clearance(s), must equal overall width.
4. Measure height as follows:
 - a. For windows, use standard inside or outside measuring procedures.
 - b. For patio doors, measure height within ¾" of floor, either from ceiling or a point at least 6½" above the door frame. (Check slat count tables if blind is to completely clear the doorway.)

Ordering

1. Indicate whether two or three blinds are to be mounted on one headrail.
2. Specify total width of headrail.
3. Indicate each panel width separately, specify left blind first, continuing to the right.
4. Specify control positions.
5. Add appropriate surcharge, if to the left of the dashed line on the price chart.

- Ladder supports and lifts will be color-coordinated to the headrail color
- Contact customer service to change color coordination

Specifying Colors

1. Make a diagram of the blind, showing height.
2. From the slat count table, determine the total number of slats.
3. Bottomrail will match the color of the last slat if color pattern consists of at least four color slats in each color group. Otherwise, it will be the color of the headrail.

Example of Repeat Pattern:

3 Slats—648 Shadow
3 Slats—205 Arctic White
3 Slats—771 Distant Thunder
3 Slats—648 Shadow

Specialty Shapes: Skylights Dual Headrail or Incline Wire Blinds

Measuring Information

Inside Mount

- A. Width**—Measure the exact inside width of the window casing from one inside edge to the other in three different places. Record the narrowest measurement.
- B. Height**—Measure the exact height in three different places from the top edge of the opening to the top of the sill. Record the longest measurement.

Do not deduct for headrail clearance gaps. Manufacturer will make all allowances for both width and height. Headrail, tension rail, and slats will be manufactured $\frac{1}{2}$ " less than the dimension given as width. Proper deductions will be made for blind height.

Outside Mount

Measure width and height dimensions, and specify as "blind size, cut exact." The manufacturer will not make any allowances for width or height. Headrail, tension rail, and slats will equal dimensions given as width. Blind height will refer to the distance from the top of the upper bracket to the lower bracket of the installed blind and will equal dimension given as height. Do not deduct for headrail and tension rail clearance gaps.

Incline Wire Skylight

Ideal for skylights with less than a 45 degree angle.

NOTE: Blinds can lift and tilt.

- A. Width**—Measure the exact inside width of the window casing from one inside edge to the other in three different places. Record the narrowest measurement.
- B. Height**—Measure the exact height in three different places from the top edge of the opening to the top of the sill. Record the longest measurement.
- C. Rise**—The vertical measurement from the top of a window to the RUN to form a 90 degree angle.
- D. Run**—The horizontal measurement from the bottom of a window to the RISE to form a 90 degree angle.
- E. Angle**—The degree the window is slanted perpendicular (at a right angle) to the floor.
- F. Catenary**—The degree a blind may possibly bow. No measurement needed. "C" and "D" are used to calculate the angle (must be less than 45 degrees).

Options

Making a Template for Specialty Shape Windows

1. Tape butcher paper, kraft, or construction paper over the window opening allowing plenty of overlap.
2. Being careful not to press against the template paper while tracing, draw an exact outline of the window opening. Pressing on the template paper may distort the paper and cause the wrong size to be made.
3. Remove the paper from the window opening. If the blind is an outside mount, add the desired amount of overlap to the window outline and draw a second outline around it to match the shape of the finished blind. **Be sure to erase the inside line.**
4. Mark the dimensions on the template. Check that the template dimensions match your measurements of the actual window opening.
NOTE: Make sure the template is of the window opening, not the glass only measurement.
5. **Cut the shape from the paper.**
6. **PLACE THE TEMPLATE BACK INTO THE WINDOW OPENING TO CHECK FOR PROPER FIT COMPLETELY AROUND.**
7. Indicate on the template
 - “Room side” and “top” on the template
 - Purchase order number
 - Customer’s name
 - Your store name and account number
8. Roll up template and place in a mailing tube.
DO NOT FOLD TEMPLATE.

NOTE: Extended arches only need 6" below the spring line

NOTE: This is just a sample for illustration purposes only—other information may be needed for your order.

General Information

Valance Measuring Information

Valances are supplied with your order in one of the following styles depending on how your blind will be mounted. For a more custom look, the valance and returns may be special ordered to your measurements.

NOTE: Valances with returns are measured and cut from the INSIDE of the miter to ensure the most accurate fit when installed over the headrail or window frame.

Blinds ordered as an outside mount will be supplied with returns sized to cover the end of the blind back to the mounting surface. If projection brackets are requested when the blind is ordered, wider returns will be sent automatically. Outside mount blinds are available without returns upon request. Blinds ordered as an inside mount are supplied without returns and look best when the blind and valance can be completely recessed because the ends of the valance are straight cut. Returns are available if requested at the time of order for inside mount blinds that are not completely recessed.

NOTE: Minimum return width is 1".

Additional ordering information:

- Please state at the time of order if the valance and return measurements are for the exact size required so that no additions or deductions are made.
