Light Control and Privacy

Sheer: Allows light to enter the room where light control and privacy are not a concern. Objects in the room can be seen quite clearly through shades.

Light Filtering*: Gently diffuses incoming light to provide some light control and moderate privacy.

Room Darkening*: Significantly dims light entering the room. Deeper fabric colors offer more light control and moderate privacy.

Blackout: Blocks all light from entering the room. All fabric colors provide maximum light control and complete privacy.

*These fabrics are translucent and their colors may be influenced by changing light conditions. Colors may appear to vary depending upon the time of day and type of lighting, as well as whether the shade is partially or fully lowered.

- A single continuous-loop cord raises and lowers the shade and keeps the cord the same length
- Five colors of continuous-loop cord available
- Tensioner device will coordinate with color of the loop
- Continuous-loop Lift stacks the fully raised shade more compactly than a Standard Cord Control and holds it more securely
- Safety tensioner device included, tensioner must be installed for shade operation
- Available as multiple shades on one headrail (standard gap ½" (1.3 cm))
- Available on Top Down Only specialty shades
- Side mounts available up to 60" (152.4 cm) wide by 96" (243.9 cm) high

- Made as individual shades
- Each shade will have its own control, we recommend opposite corners
- Indicate for each shade whether left or right and butt or bypass
- Bypass shade is mounted into the corner, butt shade is abutted to the other shade

Measuring Information

Mounting on a Wall or Molding

Measure the width of each window from the corner on the mounting surface (molding or wall) to the point you would like to cover.

Mounting Above the Molding:

Measure the width of each window from the corner on the mounting surface to the point you would like to cover.

Projection measurement is the distance needed to clear any molding or obstructions that the shade will be mounted above.

NOTE: The **Projection (P)** distance is needed to correctly calculate deductions for installations where the shades will use shims or projection brackets to clear molding. All projection distances must match for correct deductions to be calculated.

Bay Windows

- No charge
- Made as individual shades
- Each section will have its own control
- Manufacturer will take appropriate deductions for proper fit. DO NOT order as a bay window shade if you do not want manufacturer to take deductions
- Cornices are not available on bay windows
- For Bottom Up/Top Down and Sun Up/Sun Down with Standard Cord Control the corner controls will be hard to reach
- For Slide-View shades there is a light gap between adjacent side rails

Measuring Information: Three-sided Bay Window

Measure:

- L and R:** Width of each side window from the corners on the mounting surface to the point you would like to cover.
- C1:** Width of the center window on the mounting surface from corner to corner.

Angle L-C1: Angle between the (L) and (C1) windows.

Angle C1-R: Angle between the (C1) and (R) windows.

Projection: If needed: The depth of the trim or molding the shade will be mounted above.

Measuring Information: Four-sided Bay Window

- L and R:** Width of each side window from the corners on the mounting surface to the point you would like to cover.

- C1, C2:** Width of each center window on the mounting surface from corner to corner.

Angle L-C1: Angle between the (L) and (C1) windows.

Angle C1-C2: Angle between the (C1) and (C2) windows.

Angle C2-R: Angle between the (C2) and (R) windows.

Projection(P): If needed: The depth of the trim or molding the shade will be mounted above.

NOTE: The **Projection (P)** distance is needed to correctly calculate deductions for installations where the shades will use shims or projection brackets to clear trim or molding. All projection distances must match for correct deductions to be calculated. For additional windows on bays with up to five sides continue with number progression for center shade sizes (C1, C2, C3, ...) and angles (Angle C1-C2, Angle C2-C3, ...) as needed.

Measure each bay angle using a protractor or angle finder or use two business cards in each bay corner as illustrated above, trace on paper, and fax to customer service.

The angle to use between adjacent center bay windows along a straight section of wall is 180° (degrees).

Wood Characteristics

Wood used to manufacture Premier Wood-Wrapped Rails has many natural characteristics that make it truly unique; no two pieces of hardwood are alike. The following are all natural characteristics of wood, and we do not consider them to be defects:

- **Grain** – The direction, size, and appearance of wood fibers vary greatly depending on where the wood is cut within the tree
- **Tiger Striping** – Directional change in grain pattern
- **Burl** – Formed from an irregular growth on the outer edge of the tree
- **Bird's Eye** – Small area on the surface of the board where fibers are contorted to form circular figures that resemble birds' eyes
- **Mineral Marks** – Dark or discolored areas caused by minerals which the tree extracts from the soil; they can be either streaks or stains, usually blackish blue

Natural variations in color and grain effect are inherent in the beauty of wood. These variations are within established industry guidelines and should be expected. In addition, shutters may stain slightly darker or lighter than the samples shown.

NON-PERFECT ARCHES are not constant at all points. Deviation of even $\frac{1}{16}$ " (0.2 cm) makes it imperfect. Non-perfect Quarter Circles and Circles are those where the width and height are different.

Options

Making A Template For Specialty Windows

1. Tape butcher paper or heavy brown wrapping paper over the window opening allowing plenty of overlap.
2. Being careful not to press against the template paper while tracing, draw an exact outline of the window opening. Pressing on the template paper may distort the paper and cause the wrong size to be made.
3. Remove the paper from the window opening. If the shade is an outside mount, add the desired amount of overlap to the window outline. Draw a second outline around it to match the shape of the finished shade. **Be sure to erase the inside line.**
4. Mark the dimensions on the template. Check that the template dimensions match your measurements of the actual window opening.

NOTE: Make sure the template is of the window opening, not the measurement of the glass only.

5. Cut the shape from the paper.
6. **PLACE THE TEMPLATE BACK INTO THE WINDOW OPENING TO CHECK FOR PROPER FIT.**
7. **Indicate on the template:**
 - ☐ "Room side" and "top"
 - ☐ Purchase order number
 - ☐ Customer's name
 - ☐ Your store name and account number
8. Attach a copy of your purchase order to the template.
9. Roll up template and place in a mailing tube.
DO NOT FOLD TEMPLATE.

NOTE: This is just a sample for illustration purposes only—other information may be needed for your order.

General Information

Energy Performance

Grab® Cellular Shades are the smart choice for every window in your home. For year-round comfort, Cellular Shades effectively insulate your windows from the heat and cold. Regardless of climate, they are our most versatile and energy efficient window treatment available.

Cocoon fabric is constructed with three layers made up of a 100% metalized polyester film sealed between two layers of soft, high quality 100% spunlace fabric. This unique design forms a soft, thick barrier of insulation. Independent tests prove Cocoon ¾" (1.0 cm) Double Cell fabric is one of our most energy efficient fabrics on the market.*

Block the Cold

Homes in colder climates benefit from Cellular Shades' insulating properties to block out the cold and regulate inside temperatures.

Cocoon ¾" (1.0 cm) Double Cell delivers a 22% reduction in heat transfer during the winter.*

Block the Sun

Homes in warmer climates benefit from Cellular Shades' light-blocking properties to keep the heat from transferring to the inside.

Cocoon ¾" (1.0 cm) Double Cell delivers a 56% reduction in heat transfer during the summer.*

*Values listed are for Cocoon ¾" (1.0 cm) Double Cell. Based on third party testing, Architectural Testing Incorporated (ATI).

R-Value

R-Value indicates the effectiveness of the window covering at preventing energy from flowing to the outside. The higher the R-Value, the greater the insulating effectiveness.

Solar Heat Gain Coefficient (SHGC)

SHGC measures how well window covering blocks heat from the sun from flowing to the interior. SHGC is expressed as a number between 0 and 1. The lower the SHGC, the better a product is at blocking unwanted heat gain.

General Information

UV Protection

Graber® Cellular shades effectively block ultraviolet (UV) rays. Over exposure to the sun's UV rays can damage furnishings, wood floors, draperies, carpeting and artwork. The Ultraviolet Protection Factor (UPF) rating system measures the UV protection provided by the fabric.

Fabric inches (cm)	UPF Rating	% of UV Blockage
$\frac{3}{8}$ (1.0) Double Cell: Cocoon, Elegant Neutrals, Facets, Garden Retreat, Sala, Translucence $\frac{3}{8}$ (1.0) Single Cell: Cocoon, Elegant Neutrals, Garden Retreat, Night Sky, Solitude, Translucence $\frac{3}{4}$ (1.9) Single Cell: Elegant Neutrals, Facets, Garden Retreat, Scroll, Scroll FR, Solitude, Translucence	50	99%
$\frac{3}{8}$ (1.0) Single Cell: Cambridge, Simply Sheer, Valletta $\frac{3}{4}$ (1.9) Single Cell: Simply Sheer, Valletta	<15	71%

UPF Rating

The UPF Rating system measures the UV protection, both UVA and UVB provided by fabric. It is very similar to the SPF rating system used for sunscreens. UPF ratings range from 15 (good) to 50+ (excellent). Shade with a UPF of 50 blocks 99% of the UV radiation.

UV Blockage

UV Blockage is directly related to UPF and shows window covering's effectiveness at preventing ultraviolet rays from entering an interior. The percentage rating indicates the amount of UV rays blocked by the shade.

Sound Absorption

Graber Cellular shades absorb sound to make rooms comfortable and cozy. The noise reduction coefficient (NRC) represents the amount of sound energy absorbed by the shade. An NRC of 0 indicates perfect reflection; an NRC of 1 indicates perfect absorption.
