Kirsch® is proud to extend a 10 year warranty on all Kirsch® Drapery Hardware products manufactured after July 1, 2018 using all Kirsch® components. This is part of our commitment to providing the highest quality products, which has been our continued tradition since 1907.

COVERED

by a 10 year warranty

- Kirsch® Drapery Hardware products are covered for defects in materials, workmanship or failure to operate for 10 years from the date of purchase (unless shorter periods are provided below), provided that the original retail purchaser continues to own the product.
- All internal mechanisms.
- Components, brackets and operational cords.
- Operational cords for a full 7 years from the date of purchase.
- Repairs and/or replacements will be made with like or similar parts or products. Style, color or components may vary depending on original purchase date.
- Kirsch® motorization components are covered for 5 years from the date of purchase.

NOT COVERED

by a 10 year warranty

- Any conditions caused by normal wear and tear.
- Abuse, accidents, misuse or alterations to the product.
- Exposure to the elements (sun damage, wind, water/moisture, salt air) and discoloration or fading over time.
- Normal maintenance associated with motors and related accessories including, but not limited to, recharging and replacement of batteries.
- Failure to follow our instructions with respect to measurement, proper installation, cleaning or maintenance.
- Shipping charges, cost of removal and reinstallation.

Kirsch® (or its licensed fabricators/distributor) will repair or replace the product or components found to be defective.

TO OBTAIN WARRANTY SERVICE

- Contact your original dealer (place of purchase) for warranty assistance.
- Contact Kirsch® at (800) 252-2512 for technical support, certain parts free of charge, for assistance in obtaining warranty service or for further explanation of our warranty.

NOTE: In no event shall Kirsch® or its licensed fabricators/distributor be liable or responsible for incidental or consequential damages or for any other indirect damage, loss, cost or expense. Some states do not allow the exclusion or limitation of incidental or consequential damages, so the above exclusion or limitation may not apply to you. This warranty gives you specific legal rights, and you may also have other rights which vary from state to state.

Different warranty periods and terms apply for commercial products and applications.

BUCKINGHAM®

Buckingham® | 1⅜ inch Finials

for 1⅜ inch Buckingham® Poles & Estate™ Traverse Rods

You no longer have to wait for our beautiful made-to-order Buckingham® Collection. For a small fee, you can now rush your order and have your stunningly detailed pieces sooner than standard lead time. Beauty and quality in modern times.

All rush production must be noted on the purchase order. Please use item number **9999493420** for rush production on purchase orders. The rush fee is \$200 per order. Production time is three days plus shipping. Customer discounts are not applicable to this fee. The 3 Day Rush guarantee is valid for orders up to 50 finished pieces. The lead time for orders greater than 50 finished pieces will be quoted based upon the order quantities and specifications. Please contact your Kirsch Sales Representative or Kirsch Distributor for rush lead time above 50 pieces.

1⅜ inch Decorative Bracket Weight Chart

for 1⅜ inch Stationary Poles

Weight capacity shown is maximum per bracket when screwed into solid wood. Weight capacity is reduced when using wall anchors or screwing into other substrates. *Consult a professional for the proper screw and wall anchor for your application as many factors affect the mounting strength.*

AMP™ MOTORIZATION

Overview & Benefits

Why AMP™?

The slim design of the quiet, yet powerful motor and the position on the track allows the motor to tuck seamlessly behind your drapery panel so you'll never have to sacrifice your style or comfort. For safety measures, you're able to move the draperies with a gentle tug, allowing for operation when a remote is not present or if a guest is unaware of the motorization feature. This safety feature also allows the disengagement of the motor from the carriers in case of a power outage so draperies may be opened in the event of an emergency. AMP™ Motorization is available on our most popular traversing tracks, Estate and Architrac® Series 94001 and in drapery header styles Ripplefold™ and pleated for a variety of styling options. This is comfortable living at its finest.

For AMP™ Motorization brochure, programming instructions and installation instructions, please visit the drapery hardware resource library at kirsch.com.

Benefits & Features

AMP™ Motorization

- Motor mounts to the back of the track which allows a seamless look between motorized and cord or baton traverse rods
- Drapery fabrication does not need to change between cord or baton controlled draperies and motorized draperies; No additional returns or any special instructions
- Limits are set automatically after installation
- Remote control is radio frequency and easily pairs with the motor
- Tug feature; when drapery is pulled the motor will traverse the drapery
- Architrac® Series 94001 Rods with AMP™ cannot be bent or curved

Frequently Asked Questions

What is the weight capacity?

64 lbs Motor is rated to 64 lbs. Be sure not to exceed the Estate or Architrac track specifications to ensure your motor operates optimally.

Can you double the weight capacity by using two motors?

No Only use one motor per rod.

Does AMP™ offer limit setting?

Yes The motor automatically sets its limits.

Does AMP™ offer touch control?

Yes The tug feature allows you to pull on the drapery and the motor will automatically open or close your draperies.

How long is the power cord?

6 ft The durable power cord is extra long for out of reach places. Any extra can be rolled and secured for a tidy look. Cable extensions are available in 15', 4', 10' and 20' lengths to reach outlets that are farther away from the motor.

Is there a wall switch?

Yes There are Flush Mount and Surface Mount Wall Switches available.

Does AMP™ offer a warranty?

Yes See the Kirsch Warranty document for more information.

ESTATE™ RODS

Overview & Benefits

Why Estate™?

The Estate™ Rod Collections are the flagship of the Kirsch® Decorative Drapery Hardware product lines. Estate™ rods are decorative, 1¾ inch or 2 inch traversing drapery rods with wheeled carriers that are designed to carry today's heavier draperies. Having set the interior design standard for decades, each of the Estate™ collections are characterized by inspired finials, premium finishes and precision engineered components. Buckingham®, Designer Metals™, Wood Trends™, Varia and Chroma Collections are featured in countless luxury venues and designer homes throughout the world.

Benefits & Features

AMP™ Motorization

- Easy to use
- Quiet, powerful motor
- Pleated or Ripplefold™ drapery heading styles
- Available on Estate™ Rods or Architrac® Series 94001 only
- For more information on AMP™ Motorization see page 79

Ripplefold™

- Panels can be pressed flat, yet fall into folds
- Headings are suspended under the track
- No hooks or pins to install
- Stack back space is less than conventional Pleated draperies
- Draperies snap on and off carriers for easy installation
- Interior drapery appearance is identical to exterior-facing drapery appearance

Pleated

- Can be used with most track systems using slip-in or pin-on hooks
- Headings can be suspended under the track or over the face of the track to conceal hardware
- A popular drapery heading style
- Four carriers per foot is standard, additional carriers or rings can be ordered if necessary

Ordering Guidelines

- ESTATE™

 - **Use the order form on the online Kirsch Resource Library website**
 - **Maximum** assembled set width is 16 feet
 - **Minimum** assembled set width is 18 inches
 - Designer Metals™ Estate™ Traverse Rods over 8 feet will be spliced. The cost of the keystones will be included with a spliced Estate™ Rod per the chart below. If more splices are requested, there will be an additional charge. Please indicate color and quantity on Estate™ Traverse Rod order form on the online Kirsch Resource Library
- Assembled sets do not come with finials and must be purchased separately
 - Finials may be selected from the 1¾ inch or 2 inch Buckingham®, Designer Metals™ or Wood Trends™ Collections
 - For pleated or Ripplefold™ draperies only
 - Set includes 4 rings (if available)/slides per foot – for additional rings/slides see pricelist
- Any additional rings (if available)/slides must be ordered at time of purchase for an additional cost
 - For mounting options, see page 84-85
 - **Rod manufactured to specific width dimensions cannot be cut down after produced**

Track Length	Number of Splices/ keystones included

ARCHITRAC®

Overview & Benefits

Why Architrac®?

The Architrac® heading system supports three popular drapery heading styles. Outstanding functionality for commercial applications, versatile enough for residential applications, Architrac® delivers performance for the most demanding applications. All assembled sets come complete and ready-to-install and are available in baton, hand and cord draw systems and our AMP™ Motorization is available exclusively on our best selling Series 94001.

Benefits & Features

Ripplefold™

- Panels can be pressed flat, yet fall into folds
- Headings are suspended under the track
- No hooks or pins to install
- Stack back space is less than conventional Pleated draperies
- Draperies snap on and off carriers for easy installation
- Interior drapery appearance is identical to exterior-facing drapery appearance

Pleated

- Can be used with most track systems using slip-in or pin-on hooks
- Headings can be suspended under the track or over the face of the track to conceal hardware
- A popular drapery heading style

Cubicle

- An excellent choice for where privacy is necessary; perfect for hospitals or extended care facilities
- Smooth, snag free operation
- Made of extruded aluminum for extra durability
- Inner surface is center grooved for easy installation

Ordering Guidelines

- **Use the order form on the online Kirsch Resource Library website**
- Provide rod length in inches to nearest 1/8"
- **Minimum** assembled set width is 18 inches
- The maximum track length varies by rod series. Reference the track series price grid page
- For pleated or Ripplefold™ draperies only
- Set includes 4 slides per foot – for additional slides see pricelist
- Any additional slides must be ordered at time of purchase for an additional cost
- Ideal for cubicle curtains and pleated or Ripplefold™ draperies
- For more details on bent or curved rods, please reference the Architrac® order form on the online Kirsch Resource Library
- **Rod manufactured to specific width dimensions cannot be cut down after produced**

K-Rail Overview & Benefits

Why K-Rail?

The Kirsch® K-Rail is a great example of functional design. The rounded face of the profile provides a decorative touch to our Architrac® Collection. The ability to use any of our 1⅜" finials from any of our collections, no matter the material or finish, now provides you with the ultimate power to customize your design since our K-Rail is designed in finishes that complement all of our collection finishes perfectly. You can finally bring your project to another level of customization.

Benefits & Features

Features

- Fits all 1⅜" finials
- Color coordinated to match all collection finishes
- Decorative curved fascia
- Versatile design

Ordering Guidelines

- **Use the order form on the online Kirsch Resource Library website**
- Provide rod length in inches to nearest ⅛"
- **Minimum** assembled set width is 18 inches
- **Maximum** assembled set width is 16 feet
- Assembled sets do not come with finials and must be purchased separately
- For pleated or Ripplefold™ draperies only
- Finials may be selected from any of the 1⅜" finials
- For mounting options see page 120
- Set includes 4 slides per foot – for additional slides see pricelist
- Any additional slides must be ordered at time of purchase for an additional cost
- **Rod manufactured to specific width dimensions cannot be cut down after produced**

AMP™ Motorization Technical Specifications

MOTOR UNIT	PRODUCT NO.
AMP™ Drapery Motor	62001300

MOTORIZED TRACK FEATURES	AMP™ MOTOR
POWER SUPPLY	DC 16.5V=0.89A (100-240VAC 50/60Hz 0.5A)
AMPERAGE	2.55Ah
AVERAGE LINEAR SPEED	7.8 inches/sec
POWER CONSUMPTION	40 watts
TORQUE	1.2Nm
POWER CABLE LENGTH	6 feet
VARIABLE SPEED	80, 100 & 120 rpm
CERTIFICATIONS	UL/CE
MAX. TRACK LENGTH	Estate™ – 16ft Architrac® 94001 – 16ft
MAX. LOAD	64 lbs

Follow track specifications for drapery weight.

MOTOR DIMENSIONS

MOTOR UNIT MAIN FEATURES

- Soft start/stop & manual operation
- Automatic limits on end stop
- Intermediate/favorite position

CONTROL OPTIONS

- Dry contact for external control
- RF Remote and Wall Switches
- AMP™ App with AMP™ USB Bridge

INSTALLATION & SETTING FEATURES

- Setting with buttons on motor unit
- Setting with external dry contact switch
- LED indicators

TRACKS/DRAPERY TYPES

- One-way and Two-way Draw
- Pleated
- Ripplefold™

Note: Stack size is estimated. Type of fabric used could alter these measurements.

Glossary

AMP™ Motorization

AMP™ Motorization is an operation method that allows you to open or close your draperies remotely with the use of technology and a powerful motor. Our unique design allows for the motor to mount to the back of the track, which allows for a seamless look. This unique feature allows drapery fabrication to remain the same between motorized and manually operated draperies.

Architrac® Traverse System

Architrac® Systems are a series of heavyduty aluminum traverse tracks that carry heavier weight draperies with ease. Offering smooth traversing function and are available with cord, hand/baton draw and AMP™ Motorization* options.

**AMP™ Motorization is available on the Architrac® 94001 Series.*

Basic Hardware

Basic Hardware is designed for lightweight fabrics and comes in stationary and traverse rods. These rods are telescopic and cover a specified range of sizes, making them a versatile product. All Basic Hardware is concealed by the rod pocket sewn into the fabric of a drapery or by layering the window with another drapery, cornice, valance or decorative drapery hardware rod. Its primary function is to create depth to beautiful layered window décor without being visible from the room side.

Baton

A baton is a cylindrical component used on a drapery rod/track. The baton allows the drapery to be drawn across the window by hand without touching the fabric of the drapery which means less soiling, wear and tear to the fabric. It is typically made of wood, metal, fiberglass or plastic and comes in a variety of styles, finishes, diameters and lengths.

Baton Draw

Baton draw is an operation method by using a baton to draw a drapery across a window by a baton instead of a cord, hand or AMP™ Motorization

Baton with Bypass C-Ring

A baton with bypass c-ring allows complete closure of the drapery when using a stationary pole. The bypass baton and rings are used in conjunction with a bypass bracket so the drapery panel can slide past the bypass bracket. We recommend a bracket is placed every 4' and under every pole splice.

Bracket

Brackets provide the foundation of any drapery treatment because they hold the pole or track. We recommend a bracket is placed every 4' and under every pole splice.

Bracket Extension

Bracket extensions provide additional clearance to clear the window or another under treatment such as a drapery or blind.

Butt Master Carrier

When used as a one-way draw, this carrier completes the fold for a more complete look. On a two-way draw, butt master carriers butt together at the center of the track, which allows for a continuous soft flowing drapery.

Bypass Bracket

Bypass brackets provide support for drapery treatments. Used in conjunction with bypass c-ring it allows your draperies to glide across the entire length of the pole. We recommend a bracket is placed every 4' and under every pole splice.

Bypass Ring

Rings that connect to the drapery or curtain with a clip or drapery hook and allows the ring to glide over a bypass bracket to keep your draperies and curtains functional across the entire length of the pole.

Carrier

Kirsch offers three carrier types; slides, wheeled and ball bearing. Slides are typically less expensive and just as the name infers, these carriers slide across the track. Wheeled carriers offer smoother traversing as they roll across the track. Ball bearing carriers offer the smoothest traversing as the ball bearing reduces the drag on the textile as it is pulled across the track.

Ceiling Bracket

Ceiling brackets mount to the ceiling and support the drapery pole or track. A great solution if there is a limited area to mount a bracket on the wall. We recommend a bracket is placed every 4' and under every pole splice.

Ceiling Bypass Bracket

Ceiling bypass brackets provide support for drapery treatments and allow for ceiling mounting when wall space is limited. Used in conjunction with bypass c-ring it allows your draperies to glide across the entire length of the pole. We recommend a bracket is placed every 4' and under every pole splice.

Ceiling Mount

The track or pole is mounted to the ceiling using ceiling brackets or in the case of some of our Architrac® products, tracks can be directly mounted to the ceiling.

Cord Draw	Cord draw is a method of operation. Controlled by a cord, the draperies glide across the track instead of using a baton, hand or motorized control.
Cornice	A cornice is a hard ornamental top treatment that can be constructed from different materials such as wood or metal and used as a stand alone element or layered with other treatments to add emphasis. Cornices come in various shapes and sizes and can be customized with different soft embellishments such as trims, fringe and coordinating fabrics to create a one of a kind look.
Clearance	Clearance is measured from the back of the rod to the wall. This is the amount of open space behind the drapery treatment so it can clear the window.
Cubicle	Cubicle tracks are used for soft room dividers. Typically used in a medical facility, the curtain provides an enclosure for privacy, making it a versatile room divider for many applications. The track which allows the curtain to traverse can be suspended from the ceiling or direct mounted to the ceiling.
Curtain	Curtains are an unlined light or sheer fabric which doesn't block out light or add privacy. The main purpose of a curtain is to simply add a decorative touch.
Decorative Hardware	Decorative drapery hardware provides a wide range of looks and finishes while coordinating with other elements in the room and home.
Drapery Fullness	Drapery fullness is the amount of fabric that will be needed to create the pleating or gathering which will make up the folds or ripples of the drapery. The specifications for fullness have two different scales: Ripplefold™ and all other draperies.
Drapery Header	The drapery header is the top of the finished drapery panel. The header style determines if the drapery panel will be stationary and purely decorative (non-functioning) or traversing (functional) for light control and privacy.
Double Bracket	A double bracket accommodates two poles to create a layered treatment using only one bracket to support them. We recommend a bracket is placed every 4' and under every pole splice.
Double Bypass Bracket	A double bypass bracket accommodates two poles to create a layered treatment using only one bracket to support them while allowing for the bypass c-ring to glide across the entire length of the pole. We recommend a bracket is placed every 4' and under every pole splice.
Double Ceiling Bypass Bracket	A double bypass bracket mounts to the ceiling and accommodates two poles to create a layered treatment using only one bracket to support them. Used in conjunction with bypass c-rings it allows your draperies to glide across the entire length of the pole. We recommend a bracket is placed every 4' and under every pole splice.
Drapery Panel	Unlike curtains, draperies are often a lined fabric that blocks out light and adds privacy, making draperies both decorative and functional.
Elbow	Elbows are a simple way to create the look of a french return using a 1½" or 2" wood pole versus using a finial. Elbows are also available on our Oval Rod Series 9001 in several different projections.
Endcap	Endcaps provide a stylish alternative to using a finial, especially when wall space is limited.
Estate™ Traverse Rod	Estate™ Traverse rods are a solution for heavyweight draperies that require the functionality of traversing for light control and privacy with a decorative look. Available in custom widths and are assembled to order specifications with cord, hand/baton draw or AMP™ motorization. Available in Buckingham®, Designer Metals™, Wood Trends™, Chroma and Varia.
Fascia	Fascia is the decorative material that attaches to the front of a traversing track.
Finial	Finials attach to the end of the pole and add a decorative element to the pole. They come in many styles and materials and add a decorative touch to the overall room.
Finial Plug	Finial plugs fit inside the end of all the 1½" Designer Metals™ and 1" Wrought Iron poles, allowing for a finial to be screwed into the end of the pole. Finial plugs are included with all 1½" Designer Metals™ stationary poles and all Wrought Iron finials.

Finial Wall Mount

Finial wall mounts create a support base for mounting finials to the wall as a decorative accent. A pin hook pendant is included with the finial wall mount.

Hand Draw

Hand draw is an operation method when a drapery is drawn across the window by hand versus using a baton, cord or motorized control.

Holdback

Holdbacks attach to the sides of a window allowing you to tuck the drapery behind so you can allow more light and view through from the window. They can also be used creatively as a bracket for curtains, lightweight draperies and swags.

Inside Mount Socket

Inside mount sockets are used when mounting a rod inside of a window frame.

Internal Rod Splice

An internal rod splice is used to join two stationary metal poles together to create custom lengths to fit any size window. Be sure to plan the location of the splice so that it will be covered by a bracket for stability.

K-Rail

K-Rail carries heavier draperies with ease and is a great example of functional design. The rounded face of the profile provides a decorative alternative to the Architrac® Collection. The rods can be customized by choosing from any of our 1 $\frac{3}{8}$ " finials since K-Rail is designed in finishes that complement all our other collections. This system supports both the pleated and Ripplefold™ header styles.

Lockseam

This rod offers a cost-effective way to top a window or create soft drapery panels to frame a window. These rods offer a variety of clearance options and configurations, which allow for layering a window while using only one set of installation brackets and supports the rod pocket header style.

One-Way Draw

With a one-way draw there will be a single drapery. The single panel can either stack to the left or the right of the window, depending on your preference, the operational control is usually located on the same side as the panel.

Overlap Master

Overlap master carriers allow draperies to overlap at the center of the track to ensure complete closure for light control and privacy.

Pleat

A pleat is a series of tidy folds that make the fullness of a drapery. There are many variations of drapery pleats. Some of the most popular pleats include the three finger, goblet, European and inverted.

Pole Connector

Pole connectors are used to join two stationary wood poles together to create custom lengths to fit any size window. Plan the location of the splice so that it will be covered by a bracket for stability.

Projection

Projection is measured from the front of the bracket to the wall.

Recessed Mount

A track is mounted in an area that is recessed from the rest of the ceiling.

Return

A return is measured from the center of the bracket cup to the wall. This is the additional drapery width needed so it can turn the corner and return to the wall to minimize light leakage on the side of the window. In general, a single layer treatment with no drapery or outside mount blind would require a 4" return. A double layer treatment going over a single drapery or outside mount blind would require a 6" return.

Rings

Rings attach the drapery panels to the pole. The drapery panel can be attached by clipping it to the ring or inserting a drapery hook into the ring eyelet.

Ripplefold™

Ripplefold™ is a unique drapery header style designed by Kirsch®, which offers soft, ripple like folds for a more contemporary look. The Ripplefold™ header style is best suited for traversing treatments.

Sash Rod

Sash rods require minimal clearance and projection and are typically used for sidelights and doors. These rods support the rod pocket header style.

Scarfholder

Scarfholders provide the foundation when creating a scarf treatment to gracefully frame a window. Scarves can create depth to a window or be the finishing touch to a doorway or even a mirror.

Splicing	An internal rod splice or pole connector is used to join two stationary poles together to create custom lengths to fit any size window. Plan the location of the splice so that it will be covered by a bracket for stability.
Stationary Pole	The primary function of a stationary pole with drapery panels is to accent a window. Stationary header styles include rod pocket, tab top, ring top, grommet and tie top. These header styles are a fantastic solution for a window that doesn't require a traversing drapery for light control or privacy.
Superfine®	This telescoping traverse rod is ideal for large windows, windows with obstructions in front of them and patio doors as it offers a single point of control for opening and closing the draperies. Depending on the configuration, the Superfine® can hold up to 1 pound per linear foot. This rod supports the pleated header style.
Suspension Mount	Suspension mount is a mounting option where a track is suspended from the ceiling by using suspension track components.
Teflon Tape	Easy and quick to apply, our transparent Teflon tape allows rings to be drawn effortlessly across a metal, wrought iron or wood drapery pole. This durable tape is coated with Teflon that won't scratch off even with daily use. Great when using a telescopic or spliced rod since it spans any joints in the rod to prevent rings from getting stuck.
Telescoping Rod	Telescoping rods come in a specified range of sizes, so no cutting or splicing is required to fit a specific size window. To achieve a specific size, simply extend or retract the pole to the desired length.
Tension Device	The tension device retains the cord loop on a corded track in a fixed position to promote safety and ease of use. They are required on all corded traversing drapery tracks to comply with ANSI safety standards.
Tension Rod	Tension rods are a great solution for window treatments that require minimal clearance and projection such as side lights and doors. Tension rods mount inside the window frame and don't require brackets. The spring tension rods can be shirred panels.
Two-Way Draw	On a two-way draw, there will be two drapery panels. One panel will stack to the right and the other will stack to the left of the window. Depending on preference, the cord control can be on the right or left side of the track since a drapery panel will be covering both sides.
Valance	A valance is a soft-top treatment with fabric freely hanging. Valances can be hung on a drapery rod or boardmounted. Valances are available in many different pleat styles and there are even several swag and cascade options to choose from. Valances can be layered with a drapery, blind or shade underneath.
Wall Mount	A track or pole that is mounted to the wall using wall brackets.
