## The Graber® Wood Story

### Quality of Wood Defines a Blind's Quality

We use only 100% North American hardwood in the construction of our wood blinds because of its light weight, consistent color, hardness, structural stability, and attractive grain.

### Sound Forestry Techniques

We work only with foresters who practice "sustained yield forest management"—nearly twice as much hardwood grows as is harvested in the U.S. each year. The volume of hardwoods in American forests today is greater than it was 50 years ago.

### Preserving Our Natural Resources

Our Springs Window Fashions (SWF) wood products facility consumes recycled sawdust and wood shavings, generating the heat required to dry lumber for a completely self-sufficient manufacturing process. Our Reynosa, Mexico fabrication and finishing facility is 99.7% pollution free, above any U.S. standard.

### SWF Wood Products, Grayling, Michigan

We have control over the quality of wood used—we control the process from green lumber to finished blinds. Hardwoods used in crafting Graber Wood Blinds are kiln dried and molded at our SWF wood products facility in Grayling, Michigan. The wood is dried slowly to strict wood blind specifications because structural change can occur when moisture is removed.

Molding and sanding operations provide the highest quality surface, free of defects.

### Springs Window Fashions, Reynosa, Mexico

At our state-of-the-art finishing plant in Reynosa, Mexico, components are carefully sorted prior to fabrication for color uniformity and wood characteristics. We sort wood as an end user, rather than a finishing vendor, taking out defects in a climate-controlled building. To finish the blind, we use only high quality paints and stains; on-site certified color technicians provide both application and quality control.

### What Makes Graber Traditions® Blinds Different from the Rest?

- Painted and stained wood blinds are made from 100% North American hardwoods, the premier wood used in the construction of blinds
- SWF wood products and finishing facilities provide state-of-the-art technologies and processes
- Expanded choice of finishes with PureGrain™ Finish—vibrant stains that showcase the natural grain of the wood
- Unique valance choices, specialty shapes, and more
- Traditions composite blinds have superior strength and moisture resistance
- The best customer service team in the industry—trained to answer any question about Graber Traditions Blinds
- Limited lifetime warranty

## Graber Wood Characteristics

Wood used to manufacture Graber Wood Blinds has many natural characteristics that make it truly unique. The following are all natural characteristics of wood, and we do not consider them to be defects:

- Grain—The direction, size, and appearance of wood fibers vary greatly depending on where the wood is cut from within the tree
- Tiger Striping—Occurs when a tree develops wavy grain, due to genetics, soil content, or other natural scenarios
- Burl—Formed from an irregular growth on the outer edge of the tree
- Bird's Eye—Small area on the surface of the board where fibers are contorted to form circular figures that resemble birds' eyes
- Pin Knots—Vary in size, shape, structure, and color
- Mineral Marks—Dark or discolored areas caused by minerals which the tree extracts from the water or soil; can be either a streak or a stain, usually blackish blue
- Knotty Pine/Rustic—Material contains markings that are more extreme than in standard products; the number and degree of marking will vary throughout the blind

Please be assured that these markings in no way affect the durability or the structural integrity of the blind.

Natural variations in color and grain are inherent in the beauty of wood. These variations are within established industry guidelines and should be expected. In addition, blinds may stain slightly darker or lighter than the swatches shown in the sampling.

**NOTE:** Elite Walnut, Maple, and Cherry will have the unique natural variations of these beautiful hardwoods—these variations are to be expected. Blinds made from these materials will undergo a degree of color change over time, further enhancing the beauty of the wood.

### Measuring

1. Measure overall width of the area to be covered. If space permits, an overlap of 1½" per side is recommended for outside mounts.
2. Measure the width of the area each blind is to cover. Measure and specify the left blind first, continuing to the right. Allow a minimum of ¼" between blinds for operating clearance.
3. Total width of all blinds, plus clearance(s), must equal overall width.
4. Measure height as follows:
  - a. For windows, use standard inside or outside measuring procedures.
  - b. For patio doors, measure height within ¾" of floor, either from ceiling or a point at least 6½" above the door frame. Check slat count table to see if blind will completely clear the doorway.

### Ordering

1. Indicate whether two or three blinds are to be mounted on one headrail.
2. Specify total width of headrail.
3. Indicate each panel width separately, specify left blind first, continuing to the right.
4. Specify control positions.

## How to Measure for Valance Returns

Window depths vary considerably depending on the age and style of the window. **Always** measure the window depth, regardless of the type of window treatment the client is considering. Knowing the depth when the order is placed can help prevent costly errors.

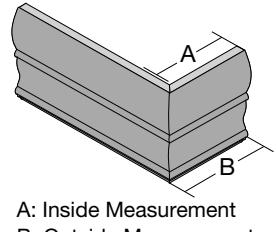

Please use our valance return cards to assist in correctly calculating valance return sizes.

To calculate the return width, use this formula:

(standard return width) minus (client window depth) = special return width to order for inside mount blind

### REMEMBER:

- Smallest return width is  $\frac{1}{2}$ " (inside measurement), maximum return width is 8"
- Returns up to 1" (inside measurement) will be glued;  $1\frac{1}{16}$ " to  $4\frac{5}{8}$ " optional glued
- The width of a return and the width of a valance are measured on the inside (back side) of the valance, not the outside (face) of the valance (see diagram at right)
- Standard return size for 2 $\frac{3}{8}$ " blinds and 2 $\frac{1}{2}$ " blinds—subtract  $\frac{3}{16}$ " prior to determining special return width

A: Inside Measurement  
B: Outside Measurement

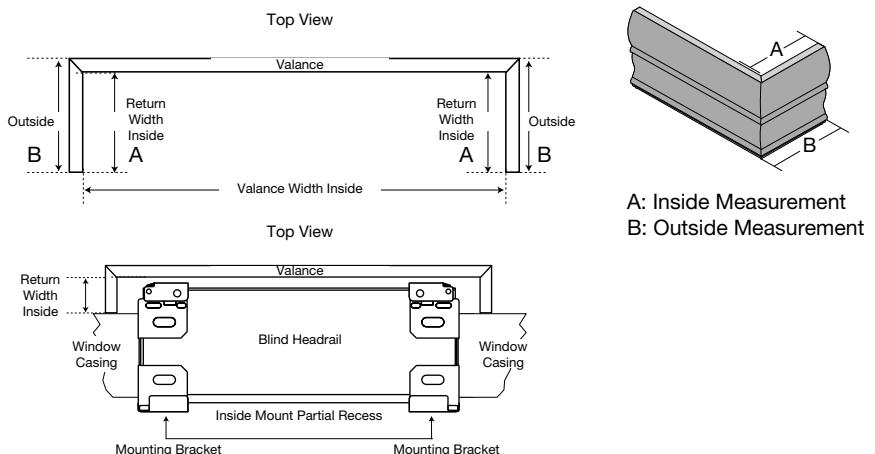

## How to Measure and Order Valances

If a valance is ordered, it is supplied in one of the following styles, depending on how your blind will be mounted. For a more custom look, the valance and returns may be special ordered to your measurements.

**NOTE:** Valances with returns are measured and cut from the INSIDE of the miter to ensure the most accurate fit when installed over the headrail or window frame.

### Blinds ordered as an OUTSIDE MOUNT

**with requested returns** will be supplied with returns sized to cover the end of the blind back to the mounting surface. If projection brackets are requested when the blind is ordered, longer returns will be sent automatically. Outside mount blinds are available without returns upon request.

A: Inside Measurement  
B: Outside Measurement

**NOTE:** Minimum return width is  $\frac{1}{2}$ ", maximum return width is 8".

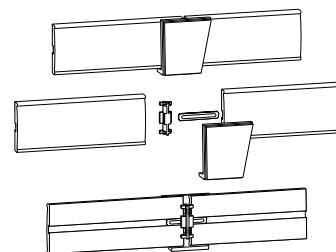

### Additional Ordering Information:

- Please state at the time of order if the valance and return measurements are for the **EXACT** size required so that no additions or deductions are made
- Different return sizes can be ordered for the same valance; always provide **LEFT** return **INSIDE** measurement first when ordering
- Returns up to 1" will be glued;  $1\frac{1}{16}$ " to  $4\frac{5}{8}$ " optional glued;  $4\frac{1}{16}$ " and greater will not be glued
- Bay and corner blinds—must specify return width on inside mount at time of order
- Single side returns are available—opposite end will be cut straight

### Inside Mount

- Wood valances 100¼" or wider will require a keystone

## How to Measure a Special Splice Location

A keystone is supplied for valance widths that require a splice. Keystones will be equally spaced unless a special splice location is requested at time of order. The placement of the splice will be calculated by the factory using an **INSIDE** measurement from the mitered corner to the location specified on the order.

Each splice location should be recorded starting from the **LEFT BACKSIDE** corner.

These formulas are used to calculate BACKSIDE valance measurements.

Inside Mount with No Returns	Ordered width -⅛"
Inside Mount with Returns	Ordered width +¾"
Outside Mount with No Returns	Ordered width +½"
Outside Mount with Returns	Ordered width +¾"

Example:

Overall valance width = 80" backside measurement

First splice from left = 30" backside measurement

Second splice from left = 50" backside measurement

For surcharge, see price charts.

**NOTE:** All measurements need to be from BACKSIDE.

### Making a Template for Specialty Blinds

1. Tape butcher paper, kraft, or construction paper over the window opening allowing plenty of overlap.
2. Being careful not to press against the template paper while tracing, draw an exact outline of the window opening. Pressing on the template paper may distort the paper and cause the wrong size to be made.
3. Remove the paper from the window opening. If the shade is an outside mount, add the desired amount of overlap to the window outline and draw a second outline around it to match the shape of the finished shade. Be sure to erase the inside line.
4. Mark the dimensions on the template. Check that the template dimensions match your measurements of the actual window opening.  
**NOTE:** Make sure the template is of the window opening, not the glass only measurement.
5. Cut the shape from the paper.
6. PLACE THE TEMPLATE BACK INTO THE WINDOW OPENING TO CHECK FOR PROPER FIT COMPLETELY AROUND.
7. Indicate on the template
  - "Room side" and "top" on the template
  - Purchase order number
  - Customer's name
  - Your store name and account number
8. Roll up template and place in a mailing tube. DO NOT FOLD TEMPLATE.  
**NOTE:** If extended arch; only 6" past the springline (point where arch portion begins) is required on the template.

**NOTE:** This is just a sample for illustration purposes only—other information may be needed for your order.
